

Preface

Greeting from IEEE CIS Japan

Welcome to CISJ2005. It is our pleasure having your attendance to our activity of CISJ2005. CIS Japan is a branch of IEEE Computational Intelligence Society (CIS) in Japan. CIS is the representative society of research fields of Neural Networks, Fuzzy Systems, and Evolutionary Computation in IEEE, and is established through the reorganization of those corresponding societies in 2004. CIS Japan is also established in 2004 by Prof. S. Amari, and current CIS Japan committee succeeded its activity from 2005. The main activity of CIS Japan is promoting research activity of CIS members in Japan. Today, as a part of the activity, we organized and sponsored CISJ2005 tutorial lectures and supported IBIS2005 meeting. We hope this event will foster the development of advanced research by IEEE CIS members and related people in Japan.

8 November, 2005

IEEE CIS Japan chair
Takashi Omori (Hokkaido University, Japan)
